DENISON HYDRAULICS
Proportional Pressure Control Valves
Series P2 & 4VP01
FEATURES, SYMBOLES

FEATURES

- Electrical proportional adjustment of operating pressure in hydraulic systems.
- Ideal as directly operated valve for low flow up to 5 l/min, as pilot valve for pressure main stages and as pilot valve for pressure controlled pumps.
- Directly operated by an easy adjustable proportional solenoid.
- Design allows very low minimum pressure (see pmin/Q curve on page 4).
- Extremely low hysteresis $\pm 1.5\%$, repeatability $<1.0\%$, high dynamic.
- Four pressure ranges available for high resolution operation: up to 50 / 105 / 210 / 350 bar.
- Mounting configurations:
  - As sandwich version (P2), for installation on DENISON pressure valve series R4 and R5 between the main stage and the manually adjustable pilot stage.
  - As subplate version (4VP01), confirming to ISO, CETOP 03.
- Proportional amplifier as rack mount Eurocard 3U, conforming to IEC 297.
- Valve and electronics from one supplier ensures optimal performance.

SYMBOL R4V...P2

Example: R4V...P2

SYMBOL 4VP01

4VP01 (Schematic drawing)
DESCRIPTION

The proportional pressure relief valve, series P2 and 4VP01, are directly operated by proportional solenoid. The electrical input to the solenoid produces a corresponding holding force on the valve cone. If the pressure in the working port exceeds the holding force, the proportional cone is lifted from its seat, releasing flow to tank. This maintains the pressure in the working port proportional to the electrical input to the solenoid. The working port for series P2 valves is Port Z, that for series 4VP01, Port P. The series P2 is provided as compact design, which can be mounted between the pilot valve and main body of the DENISON R4 and R5 range of valves. In this case, the manually adjustable pilot stage determines the pressure ceiling, and should be set approximately 10% higher than the maximum setting produced by the proportional section. The pilot drain port must be connected to a stable low pressure tank line. Pressure variations in the drain port should be avoided.

TECHNICAL DATA

GENERAL

- Mounting position: Horizontal mounting preferred, or vertical with the prop. solenoid at underside
- Direction of flow:
  - P2: Z→Y
  - 4VP01: P→T
- Ambient temperature range: –20°C...+50°C

HYDRAULIC CHARACTERISTICS

- Max. operating pressure: 350 / 210 / 105 / 50 bar
- Min. operating pressure: see curves on page 4
- Max. pressure on port T, Y or Y1: 30 bar
- Nominal flow: 5 l/min
- Fluid temperature: –20°C...+80°C
- Fluid viscosity: 10 cSt...650 cSt
- Recommended viscosity: 30 cSt
- Linearity: 2.8%
- Hysteresis: ± 1.5%
- Fluid: Confirming to DIN 51524 and 51525
- Filter: Pre-filter 280 μm; fine-filter 50 μm
- Contamination level: Max. permissible contamination level according to NAS 1638 Class 8 (Class 9 for 15 micron and smaller) or ISO 17/14

ELECTRIC CHARACTERISTICS

- Type of current: Direct current
- Min. current: 300 mA
- Max. current: 2500 mA
- Dither frequency: 270 Hz (recommended)
- Dither amplitude: 120 mA (recommended)
- Coil resistance: 4 Ω
- Type of protection: IP 65
- Relative operating period: 100%
- Electrical connection: Plug-in connector to ISO 4400
CURVES

p-U-CURVES

p-Q-CURVES

pmin-Q-CURVES
Screws for additional proportional section installation
4 off 3/8”–24 UNF x 3 1/2” lg., Order No. 359–15340–0.

**Drain Line:**
- a) only external from the pilot head Y1, to a stable low pressure tank line (for threaded or flange main stage)
- b) external from the pilot head Y1, or from the subplate Y to a stable low pressure tank line, (for subplate mounted main stage)

Distance required to remove plug-in connector.
Plug-in connector supplied as standard.

When applying the proportional section P2 to an existing application please consult your local DENISON office.

**For series R4V, R5V & R5P**

Mounting screws are included in subplate order.
This proportional amplifier is designed to control directly operated pressure valves. It proportionally converts electrical input signals into solenoid current. This amplifier has reverse polarity protection and short circuit protected PWM-output stage with max. current limit. The command signal is always connected to the same input line. The different command signals are set by DIP-switches on the main board. Potentiometers are available for the adjustment of ramp circuits up/down (independently from each other), max. pressure (I_{max}) and min. pressure (I_{min}). By changing the input signal from 0...2% of max. command signal, the amplifier passes over to the "I_{min}-leap"-function. There are diagnostic LED's to display the working condition (POWER ON), ramp function (RAMP OFF) and "FAIL SAFE" in case of short circuit or external STOP of the card. Two measuring sockets are provided to measure either the nominal solenoid current or the command voltage.

Characteristics – Proportional Amplifiers

- **Supply voltage**
  - nominal: 24 V DC
  - smoothed battery voltage: 20...32 V DC

- **Reference voltage**
  - ± 15 V / 25 mA ± 5%
  - ± 10 V / 10 mA ± 0.5% stabilised

- **Solenoid nominal current**
  - I_{max} = 2.3 A

- **Current consumption max.**
  - 12 V solenoid: approx. 2.5 A

- **Short circuit protection**

- **Inputs**
  - 1. 0...20 mA, 100 Ω input impedance
  - 2. 4...20 mA, 100 Ω input impedance
  - 3. 0...5 V, 50 kΩ input impedance
  - 4. 0...10 V, 100 kΩ input impedance

- **Outputs**
  - + = solenoid A

- **External stop**
  - illuminates on "Fail Safe", implement as NC (normally closed circuit) connection with an input voltage of 24 V; input impedance 3.3 kΩ

- **Ramp off**
  - illuminates when "Ramp off", implement as NO (normally open circuit) connection with an input voltage of 24 V; input impedance 3.3 kΩ

- **Potentiometer for**
  - max. pressure (I_{max})...
  - min. pressure (I_{min})...
  - ramp up...
  - ramp down...

- **PWM-frequency**
  - 6.2 kHz ± 20%

- **Dither frequency**
  - 270 Hz

- **Measuring socket**
  - solenoid current
  - command voltage

**Note:**
Power supply, Potentiometer, Card holder see page 12.
See publication 9–EN 6010 for further detail information on Proportional Amplifier 701–00600–8.
Dimensions Plug-in module 3U/8HP according to IEC 297

Details on the front plate

The output stages are short circuit proof. Short circuits at the output and supply input voltage falling below 20.5 V will result in the shutdown of the output stages, causing the "Fail Safe" LED come on. In this event, the supply voltage to the servo amplifier must be switched off for a period of about 10 seconds.

Schematic block diagram and terminal assignment

To run with several proportional amplifier please use common zero volts.
This command card is designed to interface with all proportional amplifiers for DENISON proportional valves.

Five multturn-potentiometers (P1...P5) allow different command signals. Selection is made by external energizing of the five selector relays on the command card. By moving the soldered bridges (+/-) it is possible to preset positive or negative commands for the desired level and direction.

In addition, the command card has a summing amplifier which enables the monitoring of the internal commands (soldered bridges 1...5), or additional external resistor array. These inputs (e.g. a 4) also make it possible to cascade further command cards if required.

The output signal to the servo amplifier is available “not inverted” (a 2) and “inverted” (c 2).

The command card has a power rectifier with a 24 V DC output (input 24 V AC). Via the output c 30/32, the command relays can be energized.

All potentiometers are adjustable on the front panel.

The operating status of the corresponding command is indicated by an LED display on the front panel (K1...K5). LED on = Command level selected.

Characteristics – Command Card

- Supply voltage:
  - command card: supply from proportional amplifier
  - rectifier: 24 V AC (min. 19 V AC)
- Command potentiometer: 5 potentiometers 0...10 V
- Command relays: 5 potential free contacts
- Relay contacts:
  - max. current on contact (resistive load): 100 mA
  - max. switching voltage: 30 V
  - coil voltage: 24 V DC, approx. 30 mA incl. LED-display
