DENISON HYDRAULICS
Pressure Reducer Valve R4R
Proportional Pressure Reducer Valve R4R...P2

Publ. 3-EN 2700-B, replaces 3-EN 2700-A
**FEATURES**

- **High Performance**: R4 valves are designed for a maximum pressure of 350 bar and a flow capacity ranging from 90 l/min (3/8") to 600 l/min (1 1/4").

- **Sensitive Control**: The DENISON poppet design delivers the minimum possible friction, superior hysteresis and optimum response to changes in operating conditions.

- **Wide Selection**: In addition to the various mounting options for the main valve body, or as cartridge for manifold applications, the ordering code offers a range of control options for valves and accessories. A solenoid vent valve is available (VV01).

- **Standardized Mounting**: Mounting configurations for R4 Pressure Controls are in accordance with international standards, and conform to CETOP-RP 121 H, ISO6264. Vent valve option allows for remote pressure control.

**SYMBOL R4R**

**SYMBOL R4R...P2**

**R4R06**

**R4R06...P2**

**Proportional pilot valve P2**
DENISON Pressure Valves are pilot operated controls consisting of two or three sections; either a high flow, poppet type seat valve section controlled by the low flow, adjustable pilot mounted on top or in the case of the Proportional Pressure Reducer Valve, the proportional section P2 sandwiched between the pilot stage and the main body.

R4R Reducer Valves are used to control the pressure in the secondary part of a hydraulic circuit, and to maintain this pressure as set by the control knob on the pilot, or according to the current input on the R4R...P2.

The R4R can be vented electrically by means of an optional vent valve, VV01. This valve is mounted between the pilot valve and the main body.

With the DENISON combined Seat Valve and Pilot design, and the range of springs available, it is possible to achieve extremely precise pressure setting.

All valve components are subject to rigorous quality control, based on international standards, thus permitting worldwide operation and interchangeable spare parts.

With the secondary Port A unpressurized, the system pressure in Port B is applied to the mini flow control valve of the pilot valve, to the pilot cone and seat (where present also to the cone of the proportional pilot valve), and to the top surface Z of the main poppet, which is held against the seat from the bottom side by the comparatively weak spring force.

Below the setting pressure the pressure on Z lifts the main poppet downwards off its seat and allows flow from Port B to Port A.

If the pressure in A exceeds the set point, the pressure in Z increases also to the setting pressure and the pilot cone is lifted from its seat, releasing a small pilot flow to tank 1).

This allows the pressure at the top of the main poppet to remain at the set point.

In the resulting float position only enough flow is passed from B to A to maintain the outlet pressure in A, as determined by the pilot head setting.

If and when the pressure in the secondary Port A equals the pilot stage setting, the main poppet closes. The small check valve in the main poppet prevents the secondary system from exceeding the pilot setting by allowing excess pressure to drain. This relief function has a very limited flow capacity up to 5 l/min.

1) The proportional valve P2 varies the pressure applied to the top of the main poppet, in proportion to the current input to the solenoid.

The manual setting of the pilot stage determines the maximum pressure and should be approximately 10% higher than the max. adjustable pressure of the proportional section (see also page 12).
TECHNICAL DATA

GENERAL

- Design: Poppet type
- Type of mounting: Subplate mounting
- Port sizes: 3/8", 3/4", 1 1/4" nominal
- Mounting position: optional
- Direction of flow: B→A
- Ambient temperature range: −20…+60 °C
- Suitability for special working conditions: Consult DENISON

HYDRAULIC CHARACTERISTICS

- Operating pressure range:
  - inlet (port B primary): 0…350 bar
  - outlet (port A secondary): 0…350 bar
  - port X: 0…350 bar
  - port Y, Y1: without pressure to tank
- Pressure setting range:
  R4R03 (3/8")  R4R06 (3/4")  R4R10 (1 1/4"
- Nominal flow: 60 l/min  200 l/min  450 l/min
- Max. flow: 90 l/min  300 l/min  600 l/min
- Fluid: Mineral oil according to DIN 51524/25
- Fluid temperature range: −18…+80 °C
- Viscosity range: 10…650 cSt
- Recommended operating viscosity: 30 cSt
- Contamination level: Max. permissible contamination level according to NAS 1638 Class 8 (Class 9 for 15 micron and smaller) or ISO 17/14

TYPE OF ADJUSTMENT

- Manual: Handwheel
- Rotation: 3.75 rev.
- Operating torque: 0.72 Nm
- Electric (Vent valve VV01): by solenoid
- Nominal voltage: Refer to ordering code page 5
- Permissible voltage difference: +5%…−10%
- Max. coil temperature: +180°C (temperature class H)
- Type of current: Alternating current (AC)
  Direct current (DC)
- Input power: 31 W
- Holding: 78 VA
- Inrush: 264 VA
- Relative operating period: 100%
- Type of protection: IP 65
- Electric proportional:
  (pilot stage P2) 0…2.5 A
  (refer to publication 3-EN 2200)

If the performance characteristics outlined above do not meet your requirements, please consult your local DENISON Office.

Screws for additional proportional section installation
4 x 3/8”-24 UNF x 3 1/2” lg., order no. 359-15340-0.

Drain Line

The pilot drain port must be connected to a stable low pressure tank line. Pressure variations in the drain port should be avoided.

a) external from the pilot head (Y1) with threaded body.
b) external from the pilot head (Y1) or from the subplate (Y) (with subplate body).

Symbol

Important: On initial start up and after long shut down periods bleed air from this plug.

Note:
For full details of the proportional section refer to bulletin 3-EN 2200.
For additional installation with pilot operated control valves please consult DENISON.
Weight (VV01): 1.7 kg

Screws for additional vent valve installation
4 x 3/8”-24 UNF x 3½” lg., order no. 359-15340-0.

Note:
For full details of the vent valve VV01
refer to bulletin 3-EN 215.
ADDITIONAL TYPES OF CONTROL

Type of Control-Code 2
Hand knob 50 mm dia.
(not for version with vent valve VV01 or P2)

Type of Control-Code 3
Acorn nut with lead seal

Type of Control-Code 4
Adjusting device with key lock.
Key must be ordered separately, order-no. 700-70619-8

The product described is subject to continual development and the manufacturer reserves the right to change the specifications without notice.
