Parker’s Accumulator Products are designed to optimize the performance of your hydraulic system, while adding safeguards that prolong equipment life. Reduced operating costs and savings from less downtime and maintenance are the benefits.

Parker Accumulators specifically...
- Provide an auxiliary power source by holding supplemental power to be used during peak periods. This allows the use of smaller pumps, motors, and reservoirs reducing installation and operating costs.
- Protect hydraulic systems and circuit components from damage due to thermal expansion and contraction in a closed system.
- Reduce costly damage to piping systems, fittings, and gauges by absorbing hydraulic line shocks.
- Supply emergency fail-safe power to complete a work safety cycle in the event of a pump or electric power failure.
- Hold necessary high pressure for long periods of time while preventing oil overheating, reducing pump wear, and saving energy.
