Remote and Direct Operated Poppet-Type On-Off Valves

Quick-Acting 2 & 3-Way Valves For Air, Liquid, Gas or Vacuum Service
Remote or Direct Operated Valves for a Variety of Industrial and Process Needs

Lexair poppet-type valves provide high flow, positive shut-off operation for a variety of industrial and process control needs. Constructed of non-corrosive materials, they can be used with a wide range of liquids and gases where quick-acting control is required.

Positive, bubble-tight shut-off is accomplished by an exclusive poppet-seat design that provides a long lasting, extrusion resistant seal. There’s easy maintenance too, with quick access to valve internal parts without the need for removing in-line piping. Smaller port sized valves have one-piece poppet assemblies that are replaced in seconds. These are important advantages when a valve is installed in hard-to-reach places.

Dual Poppet Design on Larger Valve Sizes

To minimize the pilot pressure required to actuate valves and assure fast operation with viscous media, larger port sizes of solenoid and mechanical models incorporate a dual poppet design. Inlet media flows into the large poppet chamber through orifices so that line pressure is applied in the same direction as the poppet spring to hold both poppets closed. When the valve is actuated, the piston and operating stem readily opens the inner poppet which has a small surface area that requires a minimal force to open. This immediately relieves the large poppet chamber pressure into the valve outlet so that less force is required to open the large poppet as the pin continues its stroke. The entire sequence is instantaneous, insuring fast valve response with minimal operating effort.
For High Flow, Bubble-Tight Control

**Pilot Cap**
Aluminum hard anodized for corrosion resistance (Optional: Nickel-plated brass)

**Pilot Piston With “U”-Cup Seals**
Provide low-friction positive sealing.

**Resilient, Poppet Seat Design**
Assures leak-tight shut-off for hard-to-handle fluids.

**Captive Seal Poppet Construction**
For high resistance to extrusion under pressure.

**Pressure-Assisted Sealing.**
Inlet pressure works in seal direction, assuring positive closure.

**Smaller Line Sizes Furnished with Single, Direct-Acting Poppet.**
Dual poppet design in larger sizes operate on a pressure differential, requiring minimal force for valve actuation.

**Handles, Air, Water, Oil, Vacuum—Even Non-Lube Air**

**Wide Range of Pilot Ratios**
For high media pressure, low pilot pressure operation.

**“U”-Cup Stem Seal**
Isolates controlled flow media from pilot chamber for multi-media service.

**Wide Open Flow.**
Poppet opens large orifice flow path—comparable to manual valve designs.

**Heavy-Duty Construction.**
Thick-walled bronze bodies resist hammering, cracking—add outstanding corrosion resistance.

**Wide Range of Port Sizes.**
1/4” to 2” pipe sizes.

**Big Husky Body Hexes**
For heavy-duty piping ease.

**Easy Service and Repair.**
All models have ready accessibility to internal parts without removing piping. One-piece poppet assembly on smaller sizes is replaced in seconds.
Direct Pilot Operated

**Specifications**

- **Body:** Cast Bronze (ASTM B-61)
- **Pilot Cap:** Aluminum
- **Internal Parts:** Brass and Stainless Steel
- **Seals:** Buna-N Standard
  - (Optional Seals pg. 15)
- **Temperature Range:** -30° F to +225° F with Standard Seals (300° F with optional seals)
- **Pressure Rating:** 0-500 PSI
  - Higher pressure ratings available, consult factory
- **Pilot Ratio:** See Model Number Chart

Direct Pilot Operated

Normally Closed
Air, Oil, Water or Vacuum*

These direct pilot operated valves can be used with a variety of media where quick, positive control is required from an extremely low pilot signal. With optional seals, they require no lubrication, making them ideal for non-lube air service.

Valves feature a large resilient poppet that provides bubble-tight closure, even under low pressure conditions. Bronze, brass and stainless steel construction and choice of seal materials provide excellent compatibility with a wide range of media. Available with a variety of pilot-to-line-pressure ratios.

Bottom hex nut is easily removed for quick access to valve’s poppet assembly. Buna-N U-cup seal on stem and U-cup pilot piston seal prevent controlled media from entering pilot chamber, permitting use of different media for pilot control.

Valve sizes from 1/4” to 3/4” have a threaded cap; valve models in larger sizes (as well as valve models with 8:1 line pressure versus pilot pressure) have bolted pilot cap.

*Internal Line Pressure vs. Minimum Pilot Pressure.
Direct Pilot Operated

Normally Closed
Air, Oil, Water or Vacuum*

These direct pilot operated valves can be used with a variety of media where quick positive control is required from a low pilot signal.

Designed for pressure applications with highly corrosive or ultra-pure liquid systems these direct pilot operated valves can be used where quick positive control is required. The valve is ideal for a broad range of industrial applications, from electronics to petro-chemical plants, commercial laundries, car wash operations, etc.

Valves feature a large resilient poppet that provides bubble-tight closure, even under low pressure conditions. Bottom hex nut is easily removed for quick access to valve’s poppet assembly. U-Cup seal on operating stem and U-cup pilot piston seal prevent controlled media from entering pilot chamber, permitting use of different media for pilot control.

*Internal Line Pressure vs. Minimum Pilot Pressure
Direct Solenoid Operated— Normally Closed
Air, Gas or Vacuum*

Employing the latest pulse width modulated solenoid electronics, the new valve minimizes solenoid holding current while providing a much wider input voltage range. The direct solenoid design is ideal for use in vacuum, low pressure or high pressure applications where pilot-assisted valves won’t operate.

Low maintenance and high reliability are hallmarks of the Bronze Star valves due to the elimination of any small orifices that can clog during operation. In addition, pulse width modulation electronic technology permits a very low solenoid holding current. This minimizes heat and power consumption, resulting in reduced operating costs and virtually trouble-free operation for millions of cycles.

Direct Cam Operated

Normally Closed
Air, Oil, Water or Vacuum*

These Direct operated cam valves can be used with a variety of media where quick, positive control is required. With optional seals, they require no lubrication, making them ideal for non-lube air service.

Valves feature a large, resilient poppet that provides bubble-tight closure, even under low pressure conditions. Bronze, brass and stainless steel construction and choice of seal materials provide excellent compatibility with a wide range of media.

For easy service or repair, removal of bottom hex nut from body gives quick access to valve’s poppet assembly—without the need for disconnecting piping. Three-quarter inch and larger sizes incorporate dual poppet construction to minimize operating force required and to permit rapid valve response with even viscous media.

Specifications

Body: Cast Bronze (ASTM B-61)
Internal Parts: Brass, Bronze and Stainless Steel
Seals: Buna-N Standard (Optional Seals pg. 15)
Temperature Range: -30° F to +225° F with Standard Seals (300° F with optional Viton)
Pressure Rating: 0-500 PSI “Vacuum” (use -31 suffix)

3-Way Multi-Function Solenoid Valve

Normally Open or Closed
1/8” and 1/4” NPTF

Lexair Solenoid valves are the perfect operator for Lexair’s pilot-operated 2-way and 3-way poppet valves. The 1/4” NPT male bottom port threads directly into the pilot port of Lexair pilot operated poppet valves. Low current draw and bubble-tight sealing provide millions of cycles of trouble-free service.

Explosion Proof 3-Way Valve

Normally Closed

Lexair’s explosion-proof, 3-way, normally closed solenoid valve is UL listed* for use in hazardous locations. The valve’s soft-seated poppet design provides bubble-tight sealing in air applications.

The male 1/4 NPT outlet port mounts directly on Lexair 2-way and 3-way poppet valves or other pilot operated valves. This provides simple, safe and effective valve operation in hazardous environments.

Shuttle Valve

Air, Oil, or Water

These quick acting large capacity shuttle valves reliably direct flow from either of two sources to a single output. Solid Delrin® pistons and soft rubber seats provide bubble-tight sealing, even in low pressure applications. The valve’s simple drop-out body design allows for quick and easy service without the need to disconnect piping.
