Plast-O-Matic’s PRH/PRHM in sizes 3/4” to 2” may be shipped with a new, non-rising adjusting bolt. The performance characteristics and pressure setting principles are identical. The recessed or non-rising design is set using two (2) allen keys; a 3/8” to adjust and set pressure, and a 5/32” to lock the setting. The traditional adjusting bolt with lock nut is set using a 3/4” open-end wrench.

The new, non-rising adjustment bolt is used on most regulators 3/4” to 2”. The traditional bolt is supplied with some body material combinations and on special orders.
