Strahman’s revolutionary, patent-pending Direct Diffuse Steam Trap is the only in-line steam trap on the market! The Direct Diffuse Steam Trap ensures your steam system will operate more efficiently by virtually eliminating condensate in the steam line.

Direct Diffuse’s unique, compact design can be mounted either vertically or horizontally, and is installed directly into the steam line, eliminating the need for additional plumbing. Adding Direct Diffuse to your steam mixing unit set up reduces condensate in your steam line, reduces rust caused by condensate, and significantly reduces maintenance costs.

**Specifications**

- Maximum working pressure ............... 150 psi
- Maximum working temperature with mixing unit ...................... 350°F/175°C
- No moving parts to wear out or need replacing
- Compact design can be mounted either vertically or horizontally, reducing piping design restrictions
- Lower cost - Simple design allows a lower purchase price, reduces maintenance and replacement costs, and reduces rust caused by condensate in steam lines.
- Fully compatible with all of Strahman’s Steam and Cold Water Mixing Units.

NOTE: 1-year limited warranty

**Shown:** Direct Diffuse Steam Trap shown installed on a Strahman M-5000TG mixing unit (bronze) and M-5700TG (stainless steel)

**Make your steam system more efficient by ordering a DIRECT DIFFUSE assembly today!**
